

ODS 1/2018 INTEGRATED ENVIRONMENT-SAFETY-ENERGY POLICY

The principles of sustainability according to Salvagnini: reduced consumption, safe and reliable technologies, respect for humankind and the environment.

The Salvagnini Group has always considered the achievement of standards of excellence in terms of workplace health and safety, environmental protection and efficient energy management in a risk-based thinking perspective to be strategic for the satisfaction of its customers, employees, visitors, suppliers and all other parties interested in the context in which it operates.

For this reason, it protects and promotes respect for the environment and for the workplace health and safety of all its staff in order to ensure the sustainability of its activities over time, with particular attention to improving energy efficiency.

In this perspective, all Salvagnini employees, in proportion to their skills and role, are invited to respect these principles and to adopt them in the management and operational processes that involve them, to follow the guiding principles listed below and to actively participate in the growth of the management system, with observations and proposals for continuous improvement.

- Ensuring full compliance with current legislation, codes of practice, and all other compliance obligations, even of a voluntary nature, that emerge from the context.
- Making available financial and economic resources for investments that contribute to identifying and mitigating risks to safety and the environment and to enhancing energy efficiency by favouring the use of alternative and renewable energy sources, including photovoltaic ones.
- Maintaining a healthy and safe work environment with the use of appropriate products, equipment and working methods, and increasing the awareness of each and every employee so as to eliminate accidents, occupational diseases and injuries.
- Reporting and analyzing by means of appropriate tools the presence of hazards, accidents or injuries in order to identify the root causes and prevent their recurrence.
- Minimizing any negative environmental impact related to its business, products and services (reduction in waste, air and water emissions, noise, CO2 emissions ...), by means of objectives that can be concretely realized in the short and medium term.
- Predicting the product's life cycle and the possible environmental risks so as to prevent and manage them effectively even upstream and downstream of Salvagnini's business activity.
- Collaborating and communicating with associations, competent authorities and local communities in a clear and transparent way, including through the disclosure of company policy.
